CHARACTERISTICS FOR SOYBEAN VARIETIES.....	66

## PREFACE

Our motto is “We test the best” and that is exactly what we do. Each year, the best seed companies and organizations select several of their best varieties for evaluation by the MU Variety Testing Program. We use the latest scientific principles and procedures to provide farmers and others with an interest in soybean variety performance with accurate and unbiased information.

We respect the seed companies and organizations that put their varieties to the test. We are honored that they entrust us with their valuable products. It takes courage to allow their varieties to be compared with all of the others. Not every company participates in our program for various reasons. Those companies that do participate deserve your consideration when purchasing seed for the next growing season. Thank them for their courage and tell them you saw their variety in our program.

The MU Variety Testing Program has provided Missouri farmers with unbiased variety comparisons for more than 75 years, first with corn, then soybean and wheat. We have a young and ambitious staff with excellent experience with testing crop yield performance. Our plots are placed where you farm. They have the soils and weather conditions your fields have. The MU Variety Testing Program is on-farm research in the truest sense of the word. Most of our locations are on farmer fields in your communities. Several locations are MU farms. These CAFNR owned and operated research centers sample the north, central and southeast regions of Missouri and combined with the private farm locations provide you with the diversity of environments you need to select the best varieties for your farm. View the map in our procedures section to see the placement of our locations and the cooperators that are so important to the quality of our information.

Evaluating yield and making decisions based on that evaluation are difficult because yield is highly affected by environment — even the small differences that exist across a field. We use replication, plot size, and plot placement to minimize the “noise.” Please read the procedures section of this book to better understand what we do and the tools we provide you to make variety selection decisions. Our data tables are arranged to help you quickly see how varieties compare. We strongly suggest that you use information from more than one location. Our tables of “region means” provide you comparisons across multiple locations. Although yield is extremely important, please see our variety characteristics table located near the back of the book to view additional information that you might find helpful during variety selection.

Thank you for your interest and support. Please support the companies that participate in our program. If you have suggestions on how we can improve our program, please contact me directly ([wieboldw@missouri.edu](mailto:wieboldw@missouri.edu)). The MU Variety Testing Program exists to serve your needs. We want to provide you with the best information possible.

William “Bill” Wiebold

# PROCEDURES

## Regions and locations

The MU Variety Testing Program divides the soybean growing area of Missouri into four regions: North, Central, Southeast, and Southwest. Each region contains four or five locations. The same varieties are tested in all locations of a test within a region. Locations for soybean tests are as follows:

### North Region

Albany (1), Canton (2), Rock Port (3),  
Mooresville (4), Novelty (5)

### Central Region

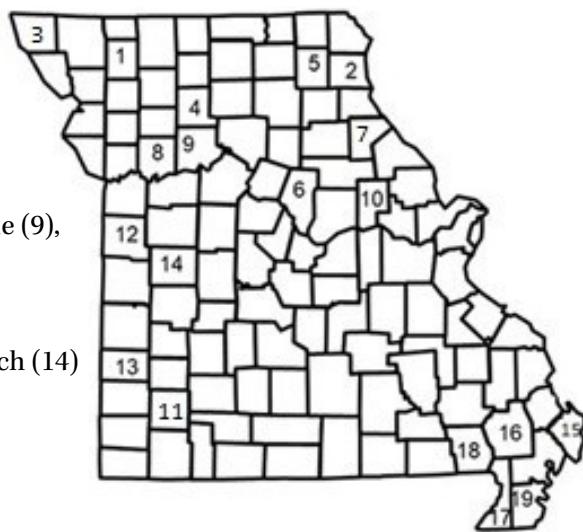

Columbia (6), Vandalia (7), Henrietta (8), Norborne (9),  
Truxton (10)

### Southwest Region

Mt. Vernon (11), Garden City (12), Lamar (13), Urich (14)

### Southeast Region

Charleston (15), Dexter (16), Campbell (17),  
Fisk (18), Portageville (19)

The MU Variety Testing Program depends upon and is highly appreciative of the cooperators that allow it to use their farms. Thank you: Beetsma Farms, Larry and Robert and Carl Compton, Bill Cook, Roy Cope, Don Deline, Kyle and David Durham, Nathan Goldschmidt, Nathan and Kurt Gretzinger, Tim and Brian Kurz, Bill Lloyd and Dan McCuthan, Aaron Porter, John Williams, Missouri Rice Research and Merchandising Council, and the Missouri Agriculture Experiment Station.

## Entries

All seed companies were eligible to enter varieties into the soybean test. Participation was voluntary and the MU Variety Testing Program exercised no control over which, or how many, varieties were entered. The MU Variety Testing Program receives no Missouri tax dollars, so a fee was collected for each entry to fund the program.

## Field plot design and plot management

Varieties were randomly arranged in the field according to a lattice design with three replications. Row spacing for all locations was 30 inches and seeding rate was 160,000 seeds/acre. Plots were two rows wide (5 feet) and 27 feet long. All rows of each plot were harvested to determine yield. Plots were planted and harvested with commercial equipment modified for small plot work. Fertilizer was applied at each location at the discretion of the farmer or the station manager. Weed control was achieved with pre-plant herbicides and various conventional post-emergence herbicides. Additional hand weeding was done as required. Management details varied among locations and are specified in the crop management table.

## Data recorded

Lodging and height were determined immediately before harvest. A scale of 1 to 5 was used to score lodging, where 1 = less than 20% plants lodged, 3 = all plants leaning moderately or 40% to 60% plants down, 5 = more than 80% plants down. During harvest, plot grain weights were measured and an electronic moisture tester was used to determine the moisture content of the grain. Yields were corrected to a moisture content of 13% and expressed as bushels/acre. The MU Variety Testing program attempted to locate sites in fields of low to moderate levels of SCN.

## **Procedures (continued)**

### **Comparing varieties**

The performance of a variety cannot be measured with absolute precision. Uncontrolled variability is involved in the determination of each plot's yield. This variability exists in all field experiments and in farmer fields. Statistics are used to account for this variability and to assist farmers in selecting superior varieties. The statistical tool used by the MU Variety Testing Program is called "least significant difference" (LSD). The LSD is simple to use. When two varieties are compared and the difference between them is greater than the LSD, the entries are considered to be significantly different. Differences between two varieties that are smaller than the LSD may have occurred by chance and are considered to be not significant. In other words, the two varieties might have the same yield, grain moisture or other characteristics of interest. The LSD can be found at the bottom of each table.

The MU Variety Testing Program arranges varieties within each table from highest yield to lowest yield. The "top yielding" variety in each test is identified by a double asterisk (\*\*) placed next to its yield. Varieties that did not yield significantly less than the highest yielding variety in the test are denoted in the tables by a single asterisk (\*). Thus, by reading down the yield column, readers can readily identify the highest yielding varieties at a location.

Variety performance may seem inconsistent from location to location and from year to year. These differences are caused by differences among environments for rainfall, temperatures, soil fertility, diseases, insects, and many other factors. To obtain an improved estimate of relative variety performance, readers should consider results from more than one environment (locations and/or years). The vast majority of varieties are entered into our tests for only one year, so comparing varieties across multiple locations becomes even more important. The MU Variety Testing Program facilitates variety comparisons across locations by publishing Region Means. Region Means tables contain yield data from all individual locations in the region with yields averaged across the locations. The variety with the highest average yield and varieties that do not differ for yield from that variety are designated with double (\*\*) and single (\*) asterisks.

Although yield usually receives first consideration, other agronomic characteristics may be equally important when selecting a soybean variety. Standability, maturity, herbicide tolerance and disease resistance are among the characteristics that deserve careful consideration. We provide a table that contains several important characteristics of varieties entered into the MU Variety Testing Program. This information was provided by seed companies. Please contact seed company representatives for the latest information. Seed entered into the MU Variety Testing Program is usually treated with one or more seed treatments. These seed treatments are identified in the table listing the variety characteristics.

### **Accessibility of data**

Results of the crop performance tests are available online at [varietytesting.missouri.edu](http://varietytesting.missouri.edu) and in print format. If you need help accessing the website or would like to receive a printed copy, please call 573-882-2307.

## CROP MANAGEMENT AT TEST LOCATIONS

### **Albany**

Region/Maturity groups: North/3 & 4  
Cooperator: Missouri Ag Experiment Station  
Tillage: Minimum tillage  
Planting date: June 9  
Harvest date: Nov. 9  
Herbicides: Fierce XLT, Roundup, Liberty, Warrant,  
Basagran, Blazer, Select Max

### **Campbell**

Region/Maturity groups: Southeast 4 & 5  
Cooperator: Missouri Rice Research and  
Merchandising Council  
Tillage: Conventional tillage  
Planting date: May 15  
Harvest date: Oct. 13  
Herbicides: Prefix, Dakota  
Insecticide: Besiege  
Fungicide: Revytek

### **Canton**

Region/Maturity groups: North/3 & 4  
Cooperator: Bill Lloyd and Dan McCuthan  
Tillage: Conventional tillage  
Planting date: June 3  
Harvest date: Nov. 8  
Herbicides: Fierce XLT, Roundup, Liberty, Ultra  
Blazer, Basagran, Select Max, Warrant

### **Charleston**

Region/Maturity groups: Southeast/4 & 5  
Cooperator: Don Deline  
Tillage: No-tillage  
Planting date: May 15  
Harvest date: Nov. 4  
Herbicides: Fierce XLT, Roundup, Liberty, Ultra  
Blazer, Basagran, Select Max

### **Columbia**

Region/Maturity groups: Central/3 & 4  
Cooperator Missouri Ag Experiment Station  
Tillage: No-tillage  
Planting date: May 3  
Harvest date: Nov. 5  
Herbicides: Fierce XLT, Roundup, Liberty, Ultra  
Blazer, Basagran, Select Max, Warrant

### **Dexter**

Region/Maturity groups: Southeast/4 & 5  
Cooperator: Aaron Porter  
Tillage: Conventional tillage  
Planting date: May 13  
Harvest date: Oct. 12  
Herbicides: Fierce XLT, Roundup, Liberty, Select  
Max, Basagran, Blazer

### **Fisk**

Region/Maturity groups: Southeast/4 & 5  
Cooperator: Nathan Goldschmidt  
Tillage: Conventional tillage  
Planting date: May 12  
Harvest date: Oct. 14  
Herbicides: Parazone, Zidua SC, Dakota, Outlook,  
Prefix, Clethodim  
Insecticide: Besiege

### **Garden City**

Region/Maturity groups: Southwest/4  
Cooperator: Bill Cook  
Tillage: Conventional tillage  
Planting date: June 6  
Harvest date: Oct. 20  
Herbicides: Fierce XLT, Roundup, Liberty, Warrant,  
Ultra Blazer, Select Max, Basagran

### **Henrietta**

Region/Maturity groups: Central/3 & 4  
Cooperator: John Williams  
Tillage: Conventional tillage  
Planting date: June 8  
Harvest date: Oct. 26  
Herbicides: Prefix, Warrant, Ultra Blazer, Select  
Max, Basagran

### **Lamar**

Region/Maturity groups: Southwest/4  
Cooperator: Larry, Robert, and Carl Compton  
Tillage: No-tillage  
Planting date: June 7  
Harvest date: Oct. 19  
Herbicides: Fierce XLT, Roundup, Liberty, Ultra  
Blazer, Basagran, Select Max, Warrant

## **Crop Management at Test Locations (continued)**

### **Mooresville**

Region/Maturity groups: North/3 & 4  
Cooperator: Beetsma Farms  
Tillage: Conventional Tillage  
Planting date: June 9  
Harvest date: Nov. 8  
Herbicides: Authority Supreme, Warrant, Ultra Blazer, Select Max, Basagran

### **Rock Port**

Region/Maturity groups: North/3 & 4  
Cooperator: Missouri Ag Experiment Station  
Tillage: No tillage  
Planting date: June 8  
Harvest date: Nov. 10  
Herbicides: Prefix, Roundup, Warrant, Ultra Blazer, Select Max, Basagran

### **Mt. Vernon**

Region/Maturity groups: Southwest/4  
Cooperator: Missouri Ag Experiment Station  
Tillage: No tillage  
Planting date: June 10  
Harvest date: Oct. 19  
Herbicides: Dual II Magnum, Roundup, Liberty, Warrant, Ultra Blazer, Select Max, Basagran

### **Truxton**

Region/Maturity groups: Central/3 & 4  
Cooperator: Roy Cope  
Tillage: Minimum tillage  
Planting date: May 25  
Harvest date: Oct. 1  
Herbicides: Fierce XLT, Roundup, Liberty, Warrant, Ultra Blazer, Select Max, Basagran

### **Norborne**

Region/Maturity Groups: North/3 & 4  
Cooperator: Kyle Durham  
Tillage: Conventional tillage  
Planting date: June 8  
Harvest date: Oct. 26  
Herbicides: Fierce XLT, Roundup, Liberty, Warrant, Ultra Blazer, Select Max, Basagran

### **Urich**

Region/Maturity groups: Southwest/4  
Cooperator: Nathan and Kurt Gretzinger  
Tillage: No-tillage  
Planting date: June 6  
Harvest date: Oct. 22  
Herbicides: Fierce XLT, Roundup, Liberty, Warrant, Ultra Blazer, Select Max, Basagran

### **Novelty**

Region/Maturity Groups: North/3 & 4  
Cooperator: Missouri Ag Experiment Station  
Tillage: Minimum tillage  
Planting date: June 8  
Harvest date: Nov. 9  
Herbicides: Verdict, Roundup, Warrant, Ultra Blazer, Select Max, Basagran

### **Vandalia**

Region/Maturity groups: Central/3&4  
Cooperator: Tim Kurz  
Tillage: Conventional tillage  
Planting date: June 3  
Harvest date: Oct. 27  
Herbicides: Fierce XLT, Warrant, Ultra Blazer, Select Max, Basagran

### **Portageville**

Region/Maturity groups: Southeast/4 & 5  
Cooperator: Missouri Ag Experiment Station  
Tillage: Conventional tillage  
Planting date: May 14  
Harvest date: Oct. 13  
Herbicides: Fierce XLT, Ultra Blazer, Select Max, Basagran

## SOIL AND WEATHER INFORMATION FOR TEST LOCATIONS

---

Location	Soil type	Precipitation (inches)
