## PREFACE

2014

Our motto is “We test the best” and that is exactly what we do. Each year, the best seed companies and organizations select several of their best hybrids for evaluation by the MU Variety Testing Program. We use the latest scientific principles and procedures to provide farmers and others with an interest in corn hybrid performance with accurate and unbiased information.

We respect the seed companies and organizations that put their hybrids to the test. We are honored that they entrust us with their valuable products. It takes courage to allow their hybrids to be compared with all of the others. Not every company participates in our program for various reasons. Those companies that do participate deserve your consideration when purchasing seed for the next growing season. Please view the table at the back of our book for names and addresses of participating seed companies. Thank them for their courage and tell them you saw their hybrid in our program.

The MU Variety Testing Program has provided Missouri farmers with unbiased variety comparisons for more than 75 years, first with corn, then soybean and wheat. Current staff members have a total of over 100 years of experience with testing crop yield performance. Our plots are placed where you farm. They have the soils and weather conditions your fields have. The MU Variety Testing Program is on-farm research in the truest sense of the word. Fourteen of our locations are on farmer fields in your communities. The other four locations are MU farms. These CAFNR owned and operated research centers sample the north, central and southeast regions of Missouri and combined with the private farm locations provide you with the diversity of environments you need to select the best hybrids for your farm. View the map in our procedures section to see the placement of our locations and the cooperators that are so important to the quality of our information.

Evaluating yield and making decisions based on that evaluation are difficult because yield is highly affected by environment – even the small differences that exist across a field. We use replication, plot size, and plot placement to minimize the “noise”. Please read the procedures section of this book to better understand what we do and the tools we provide you to make hybrid selection decisions. Our data tables are arranged to help you quickly see how hybrids compare. We strongly suggest that you use information from more than one location. Our tables of “region means” provide you comparisons across multiple locations. Although yield is extremely important please see our hybrid characteristics table located near the back of the book to view additional information that you might find helpful during hybrid selection.

Thank you for your interest and support. Please support the companies that participate in our program. If you have suggestions on how we can improve our program please contact me directly ([wieboldw@missouri.edu](mailto:wieboldw@missouri.edu); 573-882-2307). The MU Variety Testing Program exists to serve your needs. We want to provide you with the best information possible.

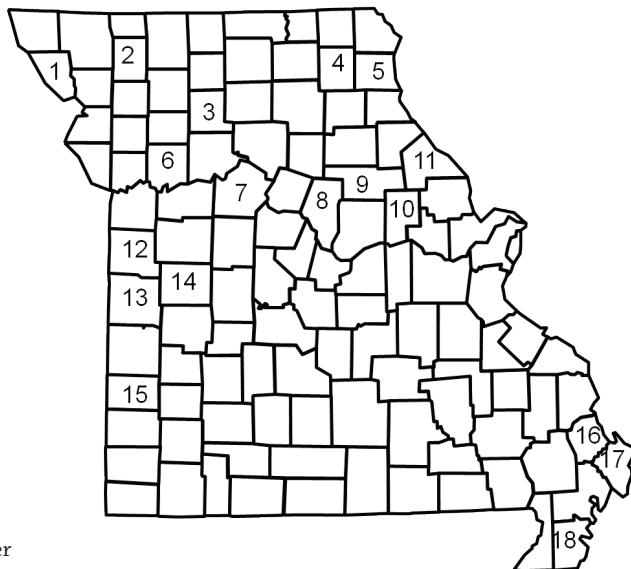

**William “Bill” Wiebold**

# PROCEDURES

## Regions and Locations

The MU Variety Testing Program divides the corn growing area of Missouri into four regions: North, Central, Southeast, and Southwest. Each region contains two to five locations, depending on the tests conducted in a region. The same hybrids are tested in all locations of a test within a region. Locations for 2014 are as follows:

1. **Craig** (Holt County); Steve Cunningham Farm
2. **Albany** (Gentry County); Hundley-Whaley Center
3. **Mooresville** (Livingston County); Beetsma Farm
4. **Novelty** (Knox County); Greenley Research Center
5. **Canton** (Lewis County); Lloyd & McCutchan Farm
6. **Henrietta** (Ray County); John Williams Farm
7. **Grand Pass** (Saline County); Ryland & Fred Utlaut Farm
8. **Columbia** (Boone County); Bradford Research Center
9. **Laddonia** (Audrain County); Kevin Freyer Farm
10. **Truxton** (Montgomery County) Roy Cope Farm
11. **Annada** (Pike County); Bob Burkemper Farm
12. **Harrisonville** (Cass County); Doug Roth Farm
13. **Adrian** (Bates County); Darrel Tenholder Farm
14. **Urich** (Henry County); Kurt Gretzinger Farm
15. **Lamar** (Vernon County); Ron Bean Farm
16. **Oran** (Scott County); Glenn Nothdurft Farm
17. **Charleston** (Mississippi County); H.S. Byrd Farm
18. **Portageville Loam** (Pemiscot County); Delta Research Center
18. **Portageville Clay** (Pemiscot County); Delta Research Center

## Entries

All seed companies were eligible to enter hybrids in the 2014 corn tests. Participation was voluntary and the MU Variety Testing Program exercised no control over which, or how many hybrids, were entered. The MU Variety Testing Program receives no Missouri tax dollars, so a fee was collected for each entry to fund the program.

## 2014 Test Descriptions

- *Non-Irrigated Corn Test* consists of five locations in the North region, five locations in the Central region, and three locations in the Southwest region. Plots were not irrigated in this test.
- *Irrigated Corn Test* consists of two locations in the Central region, three locations in the Southwest region, and four locations in the Southeast region. Plots were irrigated as weather conditions warranted.

## Field Plot Design and Plot Management

Hybrids were randomly arranged in the field according to a lattice design with three replications. At all locations, plots were four rows wide (10 feet) and 27 feet long. All tests were planted and harvested with commercial equipment modified for small plot work. Row spacing for all corn tests was 30 inches. Planting rates were 30,000 kernels/acre for the Non-Irrigated Corn Test and 38,000 seeds/acre for the Irrigated Corn Test. The center two rows of each plot were harvested to determine yield. Yields were corrected to 15.5% grain moisture.

Fertilizer was applied at each site at the discretion of the farmer or the research station manager. Herbicides were used to control weeds, and additional hand weeding was performed as required. An in-furrow insecticide was applied at all locations. Management details varied among locations and are specified in individual regional crop management summaries.

## **Data Recorded**

Lodging was rated immediately before harvest using a scale of 1 to 5 where 1 = less than 20% plants lodged, 3 = all plants leaning moderately or 40% to 60% lodged, and 5 = 80% or more plants lodged. During harvest, plot grain weights were measured and an electronic moisture tester was used to determine the moisture content of the grain. Yields were corrected to a grain moisture content of 15.5% and expressed as bushels/acre.

## **Comparing Hybrids**

The performance of a hybrid cannot be measured with absolute precision. Uncontrolled variability is involved in the determination of each plot's yield. This variability exists in all field experiments and in farmer fields. Statistics are used to account for this variability and to assist farmers in selecting superior hybrids. The statistical tool used by the MU Variety Testing Program is called "least significant difference" (LSD). The LSD is simple to use. When two hybrids are compared and the difference between them is greater than the LSD, the entries are considered to be significantly different. Differences between two hybrids that are smaller than the LSD may have occurred by chance and are considered to be not significant. In other words, the two hybrids might have the same yield, grain moisture or other characteristics of interest. The LSD can be found at the bottom of each table.

The MU Variety Testing Program arranges hybrids within each table from highest yield to lowest yield. The "top yielding" hybrid in each test is identified by a double asterisk (\*\*) placed next to its yield. Hybrids that did not yield significantly less than the highest yielding hybrid in the test are denoted in the tables by a single asterisk (\*). Thus, by reading down the yield column, readers can readily identify the highest yielding hybrids in a test.

Hybrid performance may seem inconsistent from location to location and from year to year. These differences are caused by differences among environments for rainfall, temperatures, soil fertility, diseases, insects, and many other factors. To obtain an improved estimate of relative hybrid performance, readers should consider results from more than one environment (locations and/or years). The vast majority of hybrids are entered into our tests for only one year, so comparing hybrids across multiple locations becomes even more important. The MU Variety Testing Program facilitates hybrid comparisons across locations by publishing Region Means. Region Means tables contain yield data from all individual locations in the region with yields averaged across the locations. The hybrid with the highest average yield and hybrids that do not differ for yield from that hybrid are designated with double (\*\*) and single (\*) asterisks.

Although yield usually receives first consideration, other agronomic characteristics may be important when selecting a corn hybrid. Stalk strength, maturity, and resistance to insects and diseases are among the hybrid characteristics that deserve careful consideration. We provide a table that contains several important characteristics of hybrids entered into the MU Variety Testing Program. This information was provided by seed companies. Please contact seed company representatives for the latest information. Seed entered into the MU Variety Testing Program is usually treated with one or more seed treatments. These seed treatments are identified in the table listing the hybrid characteristics.

## **Accessibility of Data**

Results of the 2014 crop performance tests are available in print format and online at "[varietytesting.missouri.edu](http://varietytesting.missouri.edu)". If you need assistance in accessing the web site or would like to receive a printed copy please call 573-882-2307.

## NORTH REGION

### CROP MANAGEMENT SUMMARY for 2014

The Non-Irrigated Corn Test was to be conducted at five locations (Craig, Albany, Mooresville, Novelty, Canton) in the North Region. Novelty was abandoned because a severe thunderstorm caused significant lodging and green snap, which lead to highly variable yield data. The Irrigated Corn Test was not conducted in the North Region.

#### **Characteristics of the Non-Irrigated Corn Test Locations – NORTH REGION**

Location	Soil Type	Soil Test					Precipitation				
		pH	OM	P	K	May	June	July	August	Season <sup>a</sup>	GDD <sup>b</sup>
Albany	Grundy silt loam	5.8	3.2%	72	249	3.4"	10.6"	2.8"	10.8"	27.6"	2663
Canton	Westerville silt loam	6.4	1.8%	123	484	1.8"	9.1"	6.4"	4.3"	21.6"	2688
Craig	Blencoe silty clay	7.4	1.5%	78	785	2.8"	7.5"	2.0"	9.6"	21.9"	2761
Mooresville	Grundy silt loam	7.0	2.9%	37	382	1.1"	5.7"	3.1"	7.0"	16.9"	2825
Novelty	abandoned										

<sup>a</sup> Region average season total precipitation (May through August) = 22.1 inches, 5.2 inches above normal.

<sup>b</sup> Region average accumulated growing degree days (May through August) = 2710, 82 below normal.

#### **Crop Management Practices at the Non-Irrigated Corn Test Locations – NORTH REGION**

## CENTRAL REGION

### CROP MANAGEMENT SUMMARY for 2014

The Non-Irrigated Corn Test was conducted at five locations (Henrietta, Grand Pass, Columbia, Truxton, and Annada) in the Central Region. The Irrigated Corn Test was conducted at two locations (Columbia, Laddonia) in the Central Region.

#### **Characteristics of the Non-Irrigated Corn Test Locations – CENTRAL REGION**

Location	Soil Type	Soil Test					Precipitation				
		pH	OM	P	K	May	June	July	August	Season <sup>a</sup>	GDD <sup>b</sup>
Annada	Tice silt loam	6.0	2.0%	86	336	4.6"	8.0"	2.4"	5.4"	20.4"	2847
Columbia	Mexico silt loam	5.6	1.8%	44	168	2.0"	4.4"	2.1"	2.8"	11.3"	2827
Grand Pass	Haynie silt loam	6.2	2.2%	39	489	1.4"	6.5"	2.8"	4.3"	15.0"	2841
Henrietta	Haynie silt loam	5.5	1.7%	57	593	1.7"	9.4"	2.9"	7.3"	21.3"	2891
Truxton	Mexico silt loam	6.4	2.4%	70	165	4.8"	4.4"	1.6"	3.8"	14.6"	2872

#### **Characteristics of the Irrigated Corn Test Locations – CENTRAL REGION**

Location	Soil Type	Soil Test					Precipitation				
		pH	OM	P	K	May	June	July	August	Season <sup>a</sup>	Irrigate
Columbia	Mexico silt loam	5.4	2.0%	46	131	2.0"	4.4"	2.1"	2.8"	11.3"	6.7"
Laddonia	Mexico silt loam	7.1	2.2%	85	150	4.5"	5.2"	2.2"	3.6"	15.5"	4.0"

<sup>a</sup> Region average season total precipitation (May through August) = 16.4 inches, 0.2 inches above normal.

<sup>b</sup> Region average accumulated growing degree days (May through August) = 2846, 69 below normal.

#### **Crop Management Practices at the Non-Irrigated Corn Test Locations – CENTRAL REGION**

Location	Dates		Fertilizer			Tillage	Herbicide			Insecticide
	Planting	Harvest	N	P <sub>2</sub> O <sub>5</sub>	K <sub>2</sub> O		Pre-	Post		
Annada	May 8	Oct 27	205	0	0	Min.	Dual II Magnum, Atrazine, Princep, Callisto	Callisto	Force 3G	
Columbia	April 22	Sept 23	180	0	0	Min.	Dual II Magnum, Atrazine, Princep, Callisto	None	Force 3G	
Grand Pass	May 19	Oct 8	220	70	70	Notill	Dual II Magnum, Atrazine, Princep, Callisto	Callisto	Force 3G	
Henrietta	May 5	Sept 23	200	40	60	Min.	Dual II Magnum, Atrazine, Princep, Callisto	None	Force 3G	
Truxton	May 6	Sept 25	145	60	60	Min.	Dual II Magnum, Atrazine, Princep, Callisto	None	Force 3G	

#### **Crop Management Practices at the Irrigated Corn Test Locations – CENTRAL REGION**

Location	Dates		Fertilizer			Tillage	Herbicide			Insecticide
	Planting	Harvest	N	P <sub>2</sub> O <sub>5</sub>	K <sub>2</sub> O		Pre-	Post		
Columbia	April 21	Sept 29	280	0	0	Min.	Dual II Magnum, Atrazine, Princep, Callisto	None	Force 3G

## SOUTHWEST REGION

### CROP MANAGEMENT SUMMARY for 2014

The Non-Irrigated Corn Test was to be conducted at three locations (Harrisonville, Urich, Lamar) in the Southwest Region. The Harrisonville and Lamar locations were abandoned because of large yield variability. The Irrigated Corn Test was conducted at three locations (Harrisonville, Adrain, Lamar).

#### **Characteristics of the Non-Irrigated Corn Test Locations – SOUTHWEST REGION**

Location	Soil Type	pH	Soil Test			Precipitation					Season <sup>a</sup>	GDD <sup>b</sup>
			OM	P	K	May	June	July	August	Season <sup>a</sup>		
Harrisonville	abandoned											
Lamar	abandoned											
Urich	Hartwell silt loam	4.7	2.8%	50	392	1.5"	6.9"	1.8"	5.0"	15.2"	2861	

#### **Characteristics of the Irrigated Corn Test Locations – SOUTHWEST REGION**

Location	Soil Type	pH	Soil Test			Precipitation					Season <sup>a</sup>	Irrigate
			OM	P	K	May	June	July	August	Season <sup>a</sup>		
Adrian	Kenoma silt loam	5.5	1.9%	68	257	3.2"	4.8"	3.8"	3.9"	15.7"	4.0"	
Harrisonville	Haig silt loam	5.6	2.6%	109	283	2.1"	11.0"	3.7"	3.6"	20.4"	2.5"	
Lamar	Parsons silt loam	7.1	2.2%	109	177	3.1"	7.6"	1.8"	1.1"	13.6"	7.0"	

<sup>a</sup> Region average season total precipitation (May through August) = 16.5 inches, 2.0 inches below normal.

<sup>b</sup> Region average accumulated growing degree days (May through August) = 2916, 84 below normal.

#### **Crop Management Practices at the Non-Irrigated Corn Test Locations – SOUTHWEST REGION**

Location	Dates		Fertilizer			Tillage	Herbicide			Insecticide
	Planting	Harvest	N	P <sub>2</sub> O <sub>5</sub>	K <sub>2</sub> O		Pre	Post		
Harrisonville	abandoned									
Lamar	abandoned									
Urich	May 14	Sept 26	170	60	75	Conv	Dual II Magnum, Atrazine, Princep, Callisto	None	Force 3G	

#### **Crop Management Practices at the Irrigated Corn Test Locations – SOUTHWEST REGION**

Location	Dates		Fertilizer			Tillage	Herbicides			Insecticide
	Planting	Harvest	N	P <sub>2</sub> O <sub>5</sub>	K <sub>2</sub> O		Pre	Post		
Adrian	May 13	Sept 26	200	100	100	Conv	Dual II Mangum, Atrazine, Princep, Callisto	None	Force 3G	
Harrisonville	May 30	Oct 29	240	0	0	Notill	Dual II Mangum, Atrazine, Princep, Callisto	None	Force 3G	
Lamar	May 2	Sept 29	270	160	160	Conv	Dual II Mangum, Atrazine, Princep, Callisto	None	Force 3G	

**Urich Southwest Region**  
**NON-IRRIGATED CORN TEST**

## SOUTHEAST REGION

### CROP MANAGEMENT SUMMARY for 2014

The Irrigated Corn Test was to be conducted at four locations (Oran, Charleston, Portageville loam, and Portageville clay) in the Southeast Region. The test at Charleston was mistakenly sprayed with Roundup, so the hybrids not resistant to glyphosate were killed. Plots were harvested and data for surviving hybrids were published in the Charleston location table, but not used in the Southeast Region Summary table. Data at the Portageville clay location were highly variable, so that location was abandoned. The Non-Irrigated Corn Test was not conducted in the Southeast Region.

#### **Characteristics of the Irrigated Corn Test Locations – SOUTHEAST REGION**

Location	Soil Type	Soil Test				Precipitation <sup>a</sup>					
		pH	OM	P	K	May	June	July	August	Irrigate	GDD <sup>b</sup>
Charleston	Dundee silt loam	5.8	1.6%	70	340	2.6"	6.8"	1.7"	2.3"	8"	3130
Oran	Commerce silt loam	6.6	1.4%	170	395	5.6"	6.3"	2.4"	5.7"	6"	3010
Portageville clay	abandoned										
Portageville loam	Tiptonville silt loam	7.0	1.3%	103	341	3.6"	8.4"	1.7"	4.6"	24"	3146

<sup>a</sup> Region average season total precipitation (May through August) = 17.7 inches, 1.7 inches above normal.

<sup>b</sup> Region average accumulated growing degree days (May through August) = 3108, 79 below normal.

#### **Crop Management Practices at the Irrigated Corn Test Locations – SOUTHEAST REGION**

Location	Dates			Fertilizer			Herbicides			
	Planting	Harvest	N	P <sub>2</sub> O <sub>5</sub>	K <sub>2</sub> O	Tillage	Pre	Post	Insecticide	
Oran	April 22	Sept 24	280	35	90	Conv.	None	RealmQ, Atrazine	Force 3G	
Charleston	April 23	Sept 18	245	0	0	Conv.	Dual II Magnum, Atrazine	None	Force 3G	
Portageville clay	abandoned									
Portageville loam	April 24	Sept 10	325	0	0	Conv	Dual II Magnum, Atrazine, Princep, Callisto	None	Force 3G	

**Charleston Southeast Region**

\*\*\* Charleston not included in region means because site was sprayed with Glyphosate

\*\* Highest yielding variety in test

\* Yield not significantly less than the highest yielding variety in the test

## **CHARACTERISTICS** of corn hybrids entered into the **2014 MU VARIETY TESTING PROGRAM**

All information in this table was provided by the seed companies. The MU Variety Testing Program does not guarantee accuracy. Please contact seed dealers for the latest information.

<sup>1</sup> Relative Corn Maturity.

<sup>2</sup> Seed Treatments listed in table were applied by seed companies to seed entered into MU Variety Testing Program. Purchased seed may contain other seed treatments. See seed company representatives and seed labels for more information.

<sup>3</sup> There are several biotechnology traits that confer herbicide tolerance to corn hybrids. "Y" in the "Gly" column means the hybrid possesses a glyphosate resistant trait. "Y" in the "Glu" column means the hybrid possesses a glufosinate resistance trait. See seed company representatives for more information and check seed bag for registered trademarks of specific traits of interest.

<sup>4</sup> There are several biotechnology traits that confer insect resistance to corn hybrids. "Y" in the "AB" column means that the hybrid possesses one or more traits that provide resistance to European corn borer and, perhaps, other pests that feed above ground. "Y" in the "BG" column means that the hybrid possesses one or more traits that provide resistance to several corn rootworm species and, perhaps, other pests that feed below ground. For purpose of this table, black cutworm is considered an above ground pest. Specific traits differ in effectiveness of control of specific insect pests. See seed company representative for more information and check seed bag for registered trademarks of specific traits of interest.
