

Characteristics of Corn Hybrids

All information in this table was provided by the seed companies. The MU Variety Testing Program does not guarantee accuracy. Please contact seed dealers for the latest information.

Brand/Hybrid	Maturity ¹	Seed Treatment ²	Biotechnology Traits

¹ CRM (Relative Corn Maturity)

² Seed treatments were applied by companies to seed entered into the MU Variety Testing Program tests. N/I means information was not provided. Purchased seed may contain other seed treatments. See seed company representatives and seed tags for more information.

³ Several biotechnology traits confer herbicide resistance. “Y” in the “Gly” column means the hybrid is resistant to glyphosate. “Y” in the “Glu” column means the hybrid is resistant to glufosinate. Check seed tags for registered trademarks of specific traits of interest.

⁴ Several biotechnology traits confer insect resistance. “Y” in the “AG” column means that the hybrid possess one or more traits that provide resistance to European corn borer and, perhaps, other insects that feed above ground. “Y” in the “BG” column means that the hybrid possesses one or more traits that provide resistance to corn rootworm, and perhaps, other insects that feed below ground. Specific traits differ in effectiveness of control of specific insect pests. Check seed tags for registered trademarks of specific traits of interest.
