

BEFORE YOU BEGIN: Private research fees are calculated from cumulative plots across locations per crop type. Send five pounds of seed for each entry in each region and include SDS sheets for any seed treatment applied. Please make checks payable to Curators of the University of Missouri.

Confidential, customizable field research

MU Variety Testing offers proprietary wheat research for variety and germplasm comparisons, seed treatments, nutrient sources and rates, planting systems, pesticide programs, growth regulators, and other customized protocols. Results are shared only with the organization that secures the service.

Standard plots are 25 feet long and 5 or 10 feet wide. Plot dimensions, observations, application timing, and field visits can be tailored to the project and may affect final pricing.

This includes seed packaging, planting, maintenance, harvest, and data analysis. Experiments may be tailored to the entrants' needs for a negotiated fee (e.g. plot size, seed treatments, special notes, fertilizer treatments). Please do not hesitate to call us to discuss additional notes or expanded testing.

Information from these experiments will not be provided to any other party. Private fee tests can be placed at single or multiple locations as space allows. Every possible effort will be made to plant, harvest, and report data for each entry accepted. No refund will be made for data lost due to circumstances beyond our control.

PRIVATE FEE STRUCTURE

\$32/plot for 1-349 plots

\$28/plot for 350-749 plots

\$25/plot for 750+ plots
